

Dr. Goldberg who is an internal medicine doctor testified to a Senate Committee regarding Senate Bill 637 and 5G as the Senate tries to expand 5G everywhere.

She stated emphatically that it is a scientific known fact that wireless radiation has biological effect in all life forms. She said there are many peer reviewed scientific studies in the Pub Med Library showing this. She said we also know for a fact that it causes cancer and DNA damage, cardiomyopathy, and mental health issues.

It also is at the center of 3 epidemics:

Diabetes, cardiomyopathy and mental health.

Diabetes: 1 in 3 American children will end up being a diabetic in his/her lifetime and 1 in 2 if you are a Hispanic female child. It will be a huge medical expense for our nation.

It has been proven that living close to a cell tower will increase your blood glucose and they know it through the hemoglobin A1C testing. So, putting multiple 5G towers in a neighborhood or even in your home is extremely dangerous.

Cardiomyopathy Precursor to Congestive Heart Failure

Deterioration of Mental health – suicide, shootings.

She compared 5G to a Human Research Program. Before you can conduct this, you must give the participant a **Consent Form** saying they know the potential side effects, etc. and must have **approval from participant after looking at all the data** to go ahead with the research. We have neither of that with 5G.

We have decades of proof that EMR is unsafe and we need to start measuring the amount of EMR we are subjected to. She gave examples of Firemen and Airline Pilots.
